Installation

Open the packing carefully not to damage the product.

Always follow assembly instruction when you assemble your product.

When moving the glass elements make sure you don't place them on hard surfaces as they will break easily.

When assembling the product make sure you can support the wall element until they are stable.

Taiga Concept recommend to use authorized installation persons and will not take responsibility for any harm to persons or goods due to irresponsible actions.

Product may have some smell after assembling but it will disappear in few weeks.

Before installation find out your country fire regulation and contact your local Taiga dealer.

Do not carry out your own modifications to the product, as it will automatically end warranty.

Check building / floor weight capacity before assembling the products.

Maintenance

After assembling the product, wipe all surfaces with clean damp cloth. Avoid using too much water, as it will damage the product. Prolonged direct sunlight may change the color of wooden surfaces over time.

Check tightness of hinges and door position every six month.

Choosing location

Always place the product inside the building.

Room temperature needs to be minimum 10°C.

Do not place the product to space that is wet or where has high humidity.

Place the product so that the minimum space between roof element and ceiling needs to be at least 10 cm. Building ceiling height minimum of 230 cm.

When placing the product make sure the door will not block any walkway and that it does not damage when open.

Maximum floor deflection $\leq 0,7^\circ$ degree / meter.

Warranty / Contact

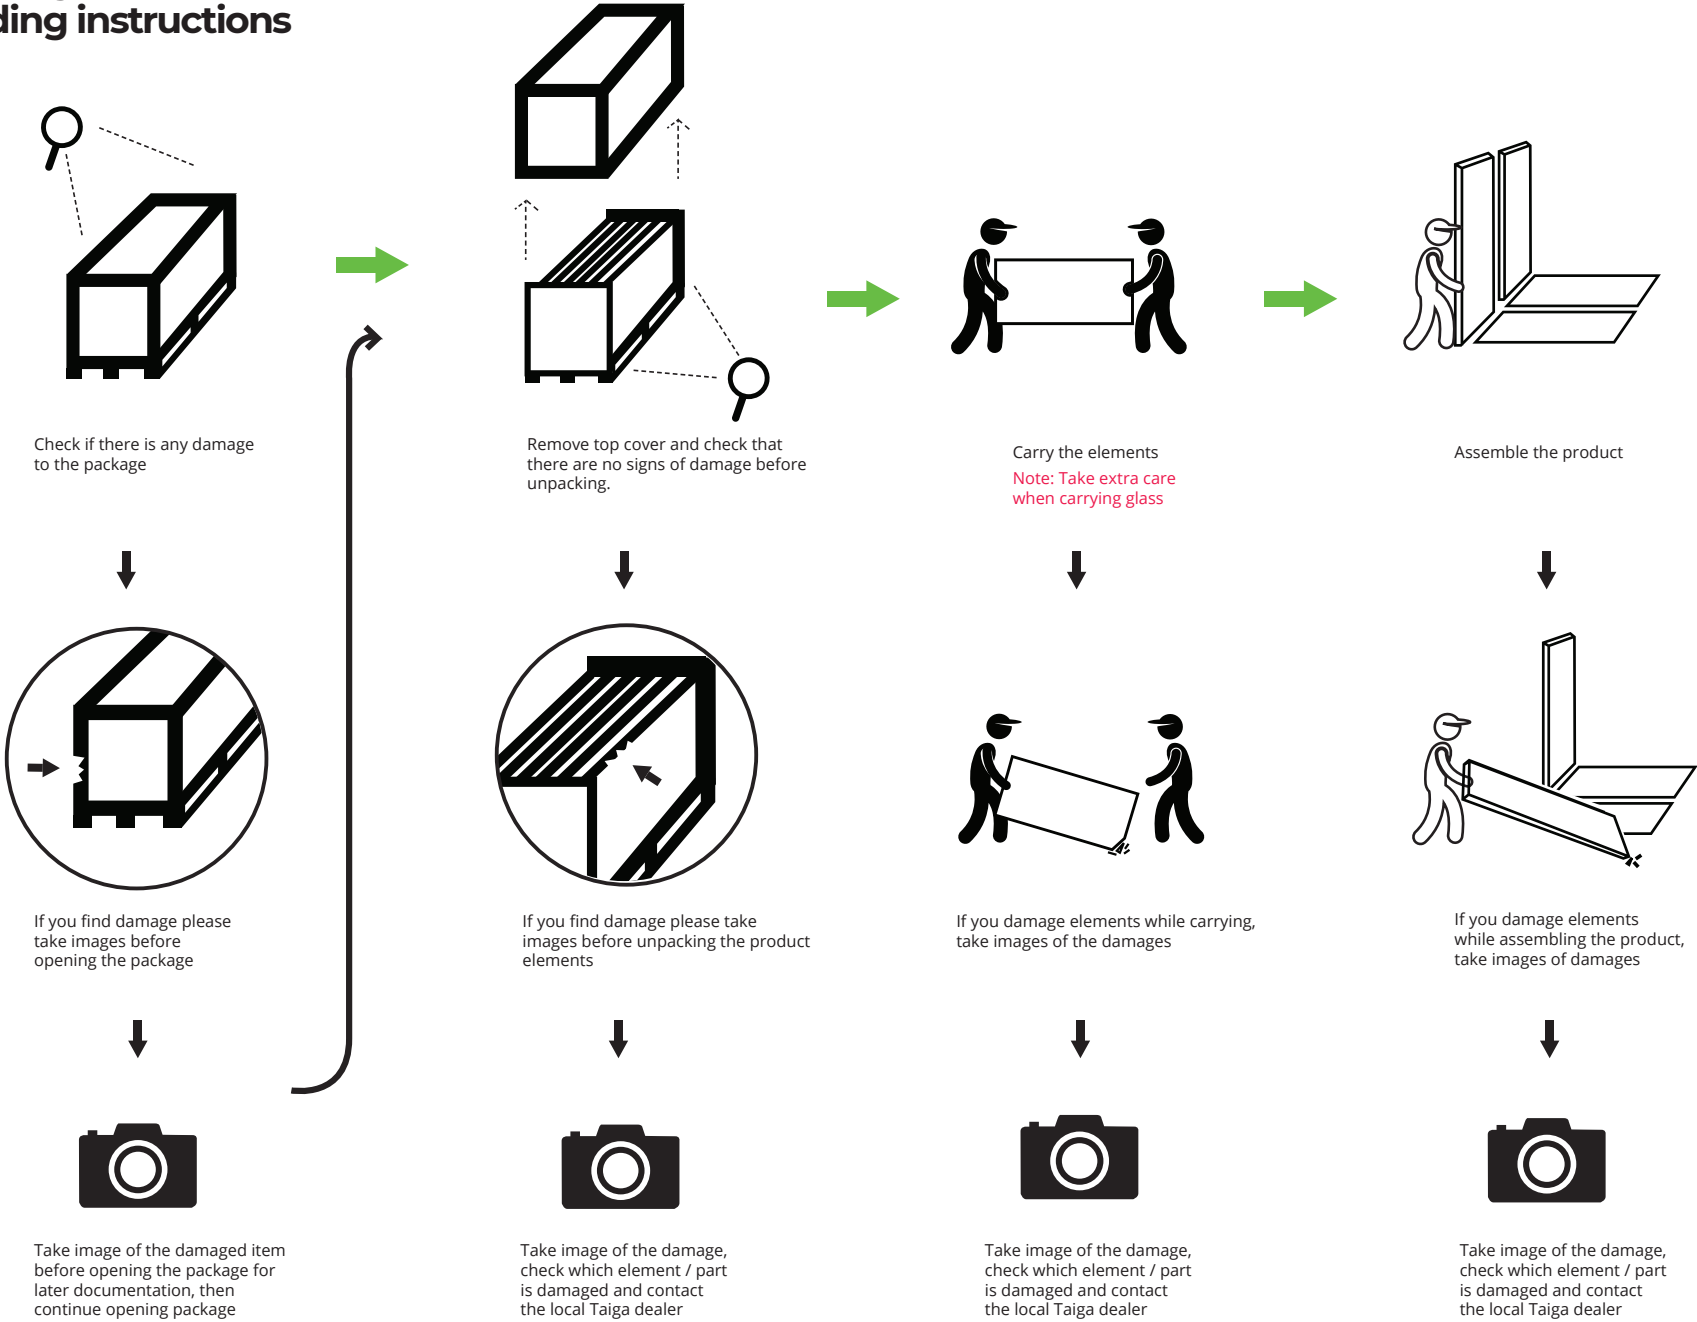

Upon successful installation please inform the local Taiga dealer to activate the warranty.

Warranty is not valid if assembly has been carried out in contradiction to the installation guide.

It is recommended to use Taiga Concept local dealers authorized assembling person.

If you have any questions or problems during installation, please contact your local Taiga dealer.
